Allowable Subject Matter

1. Claims 1-11 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art of Nakamura et al. discloses to detect the left and right lines in front of a vehicle on the road through image processing wherein the image is scanned and the edges are detected by pixel extraction and color analysis. The other closest prior art of Mouri et al. ("Investigation of Automatic Path Tracking Using Extended Kalman Filter (20005494), Society of Automotive Engineers of Japan (October 19,2000) discloses to detect lane markers by graphing the coordinates of the lane markers vs. the steering angle which are displayed in two separate display windows. Regarding claim 1: Neither one teaches nor suggests the feature of "to estimate the road parameters of the road model equation representing a road shape of the road and vehicle attitude with respect to the road, the processor being configured to estimate the road parameters inclusive of a vehicle lateral displacement, by using at least a gradient of the candidate lane marker for one window judged to be lower in the accuracy, and by using an image coordinate of the candidate lane marker for one window judged to be higher in the accuracy," that, in combination with the other claim limitations.

Regarding claim 10: Neither one teaches nor suggests the feature of "estimating road parameters of a road model equation representing a road shape of the road and vehicle attitude with respect to the road, the road parameters

inclusive of a vehicle lateral displacement being estimated by using at least a gradient of the candidate lane marker for one window judged to be lower in the position accuracy, and by using an image coordinate of the candidate lane marker for one window judged to be higher in the position accuracy," that, in combination with the other claim limitations.

Regarding claim 11: Neither one teaches nor suggests the feature of "means for estimating road parameters of a road model equation, inclusive of a vehicle lateral displacement, by using at least a gradient of the candidate lane marker for one window judged to be lower in the position accuracy, and by using an image coordinate of the candidate lane marker for one window judged to be higher in the position accuracy," that, in combination with the other claim limitations.

3. Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance". Contact Information
